

Product Information

Date: *October 27, 2011*

Product: REM101 (Emergency/Panic Remote Control)

Subject: New version release, V1.01

Web links: To go to the REM101 product page, *[click here](#)
*requires login name and password

Improvements: **Debounce delay modification**

The REM101 debounce delay (the delay between pressing the button and the subsequent action) has now been modified to 200ms. Upon its initial release, the REM101 had a debounce delay of 1 sec., which was found to be too long of a delay, especially in a situation where someone requires an activation of an emergency/panic alarm.
